

Amendments to the Drawings

A revised FIG. 18 is submitted with reference numerals. The specification is also amended to distinctly describe FIG. 18. No new matter has been introduced. Applicant has merely described FIG. 18 in more detail to assist the examiner when reviewing the new claims 19 – 22 submitted herewith.

Remarks/Arguments

Applicant would like to thank the examiner for the thorough review of the present application. Applicant has retained the services of patent attorney, Ashkan Najafi. An executed power of attorney form is attached hereto. Please amend the attorney docket number to "UP 65". Per the examiner's request, Applicant has submitted a formal IDS, which lists the prior art patents originally cited on pages 3 – 5 of the specification that were submitted on 1/22/2004.

Applicant has cancelled the original claims and presented 18 new claims, which are fully supported and enabled by the originally filed specification. For clarification purposes, it is noted that Applicant has recited the term "body" in the new claims, which was not specifically cited in the specification. However, Applicant submits the terms "material" and "square" are recited in the specification and, a person of ordinary skill in the art understands the terms "body", "material" and "square" are used interchangeably and, therefore, are equivalents throughout the claims and specification. It is also understood that the terms "dotted", "dashed" and "solid", "straight" are used interchangeably in the claims and the specification, respectively.

Also, Applicant has introduced the terms "first, second, third, fourth and fifth" when claiming specific fold lines and markings. Although such terms were not expressly used in the specification, proper antecedent support has been provided because the Applicant has merely grouped common fold lines together for purposes of clarity and to more distinctly claim the subject matter of the present invention. For example, in claims 5 – 18, the plurality of fold lines are defined at 1:4 – 7, 22 – 23, 25 – 33 wherein the "xx:xx" format denotes "Figure:reference numeral".

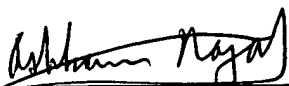

Claims 19-22 are also fully supported in the originally filed specification, as described in paragraphs 82 – 91 and newly added paragraphs 92 – 93 in the specification. The term "frame" has been recited in claims 19 - 22. Such a term is recited in paragraphs 82 – 93, when describing FIGS. 17 and 18 and, therefore, the combination of the originally filed specification and current amendments thereto satisfy the enablement and written description requirements under 35 USC § 112. Accordingly, a person of ordinary skill in the art would clearly understand what constitutes a frame by

looking at FIG. 18.

Applicant respectfully submits no new matter has been introduced, which would affect the statutory requirements of patentability, because all newly claimed recitations are clearly supported by the original description and drawings. A person of ordinary skill in the art is enabled to make and use the presently claimed invention based on the originally filed description and drawings as well as the present amendments to the specification along with the addition of reference numerals to FIG. 18.

Applicant respectfully submits no prior art of record, considered independently or in combination, teaches or renders obvious all of Applicant's claimed recitations. In view of these considerations, Applicant respectfully requests that a timely Notice of Allowance be issued in this case. Should the examiner consider necessary or desirable to make formal changes anywhere in the specification, claims and/or drawings, then it is respectfully asked that such changes be made by examiner's Amendment, if the examiner feels this would facilitate passage of the case to issuance. Alternatively, should the examiner feel that a personal discussion might be helpful in advancing this case to allowance, he is invited to telephone the undersigned attorney.

Respectfully submitted,
Law Office of Ashkan Najafi, P.A.
